Aquadura

Axroma proudly introduces the Aquadura series of **Initium3®** recycled fabrics. Made of worn out fishing gears pulled from our oceans, Aquadura is certified to use authentic ocean-bound and ocean-claimed plastic waste that is properly traced, managed, transported, refined, recycled into pellets, and extruded into textile-grade fibers. We are the pioneer in upcycling discarded fishing gears through a mechanical process that uses the least water, energy and chemicals, and generates the lowest carbon footprint. With Axroma's innovative and proprietary **Initium3®** technology inside the yarn, the Aquadura series delivers on performance, appeal, and sustainability.
